Satisfied with support services	84.5	4.8	81.9	0.3
Likely to recommend the training provider	85.9	4.4	85.5	0.2

Key outcomes by student and training characteristics

Data are only available for the student group 'qualification completers' and for RTOs with 300 or more qualification completer responses.

Data are only available for the student group 'qualification completers' and for RTOs with 300 or more qualification completer responses.

Response rate and technical information

The sample for the National Student Outcomes Survey is selected from the National VET Provider and National VET in Schools collections. The response rate was 35.8% for qualification completers at Selmar Holdings Pty Ltd.

Survey responses are weighted to population benchmarks from the national VET data collections. As the estimates from the National Student Outcomes Survey are based on information provided by a sample rather than on a population, they are subject to sampling variability; that is, they may differ from the statistics that would have been produced had all students been included and responded to the survey.

In this product we present margins of error. The margin of error is a measure of how much sampling variability there is. The smaller the margin of error, the more accurate the estimate. The margin of error is calculated such that there is a 95% chance that the estimate \pm margin of error contains the true value.

Refer to the supporting documentation in the Download section below for important information on interpreting survey data (specifically understanding the margins of error presented in this product).

Data treatment

A dash (-) or na indicates the outcome is 'not applicable'.

An asterisk (*) indicates the estimate has a margin of error greater than or equal to 10% and therefore should be used with caution.

An np indicates the data are 'not published'. NCVER does not report on estimates based on five or fewer respondents because the estimates are unreliable.
